

What is Stormwater?

Stormwater is the water produced from when rain, snow, sleet, etc. seeps into the ground or is collected on surfaces. Often, the stormwater will make its way to our streams and creeks.

To protect the people of East Petersburg Borough from flooding and to keep our streams healthy for fish and other wildlife, the Borough has many drains, pipes, and basins which make up the storm sewer system. The storm sewer system directly drains into our lakes, streams, rivers, and ponds.

Did you know that every waterway in East Petersburg, including the Little Conestoga Creek, eventually flows south to the Chesapeake Bay?

Environmental Protection Agency Stormwater Resources

For stormwater information and activities, like puzzles and videos, please visit the Environmental Protection Agency (EPA) website below.

Why should we care about stormwater?

Keeping our streams clean is very important. Everything that lives in and around our streams, like fish and other wildlife, needs clean water to live healthy lives.

Many of our rivers, streams, and lakes have trash or other man-made pollutants that hurt the health of the waterway and the creatures that need it to live.

Anything that is left outside can make its way into our streams. This means that, while leaving a small piece of trash might look like it is not a big deal, trash and other harmful debris left outside add up to equal sick fish and animals.

What can I do to help?

Taking care of waterways is everyone's job!

Clean up after your dog!

Make sure you pick up dog waste.

Pick up your trash!

Rain has to travel to get to our streams. As it travels, it can pick up whatever is in its path. If trash is left lying around, the rain will pick it up and carry it right into our streams. To keep our water clean, please pick up after yourself!

-Don't put anything down storm drains.

-Stay out of stormwater ponds, culverts, etc. Only authorized personnel may enter.

Keep our streams healthy!

The rain that falls onto your house often finds its way into creeks and streams. It's very important that the water stays as clean as possible before it flows into larger waterways.

You can help keep our water clean by making your home and neighborhood as friendly to water as possible!

Storm drains and other pipes were built to carry water away from homes and deliver it to the streams and creeks. You probably have seen these drains around; they look like metal boxes with bars on the side of the road, just like the picture below!

Because rain travels and collects whatever is in its path, it is very important that the inlets stay clean. Trash and debris, as well as organic material such as gravel, leaves, and sticks should not go into our storm drains!
